There is a strong correlation between maturity curve of IT governance and overall effectiveness of IT. This can be done through board-level direction, implementing an organizational structure with well-defined accountability for decisions that impact on the successful achievement of strategic objectives and institutionalize good practices through organizing activities in processes with clearly defined process outcomes that can be linked to the organisation's strategic objectives. COBIT is regarded as the world's leading IT governance and control framework. (2005) "Framing the Frameworks: A Review of IT Governance Research." Communications of the Association for Information Systems: Vol. 2003. ISO/IEC 38500 is applicable to organizations from all sizes, including public and private companies, government entities, and not-for-profit organizations. Short-term goals of those responsible for managing IT can be in conflict with the best interests of other stakeholders unless proper oversight is established. CGOC updated the IGPMM in March 2017.[6] The processes reflect the needs of the key information stakeholders, including legal, records information management (RIM), privacy and security, lines of business and IT. It involves evaluating and directing the plans for the use of ICT to support the organisation and monitoring this use to achieve plans. "Assessing IT Governance Maturity: The Case of San Marcos, Texas". IGPMM: The Information Governance Process Maturity Model[5] depends on maturing 22 processes that help identify - and improve the management of - information value, cost and risk. AS8015 was adopted as ISO/IEC 38500 in May 2008 ISO/IEC 38500:2015 Corporate governance of information technology.[4] (very closely based on AS8015-2005) provides a framework for effective governance of IT to assist those at the highest level of organizations to understand and fulfill their legal, regulatory, and ethical obligations in respect of their organizations' use of IT. The interest in IT governance is due to the ongoing need within organizations to focus value creation efforts on an organization's strategic objectives and to better manage the performance of those responsible for creating this value in the best interest of all stakeholders. It was soon recognized that information technology was not only an enabler of corporate governance, but as a resource, it was also a value creator that was in need of better governance. 22, No. 5, 2009, pp. 615-637. The primary focus of IT governance is the stewardship of IT resources on behalf of various stakeholders whose ranking is established by the organisation's governing body. Applied Research Projects, Texas State University-San Marcos. The primary goals for information and technology (IT) governance are to (1) assure that the use of information and technology generate business value, (2) oversee management's performance and (3) mitigate the risks associated with using information and technology. ^ "New IGPMM Essential in Confronting Data Challenges - Corporate Compliance Insights". ISO 38500 has helped clarify IT governance by describing a model to be used by company directors. Whilst managing risk and ensuring compliance are essential components of good governance, the primary focus is on delivering value and managing performance (i.e. "Governance, Value delivery and Performance management" (GVP)). Information Governance for Healthcare Professionals: A Practical Approach. De Haes, Enterprise Governance of IT: Achieving Strategic Alignment and Value, Springer, 2009. It also requires passing a 4-hour test, designed to evaluate an applicant's understanding of enterprise IT management.
